

# Ablation

Catheter ablation for tachycardia

- NOTES**
- (1) Documented successful.
  - (2) Minimum 9 minutes duration of test with no significant abnormality of rhythm or conduction, nor evidence of ischemia. METS ≥ 10 must be achieved.
  - (3) Assessment of Stroke and or Cardiac event Risk (in %) (ESC CVD risk App)
  - (4) Statement from cardiologist (%)
  - (5) Please follow regulation requirement for thromboembolic disorders.
  - (6) Electrophysiological study, undertaken at a **minimum of 2 months after the ablation**, demonstrates satisfactory results
  - (7) Individual assessment after risk assessment. For those whose long-term outcome cannot be assured by invasive or non-invasive testing, an additional period with limitations and/or observation may be necessary.
  - (8) Please use same case reference number delivered by CAA DK when resubmitting new medical information.
