OJT Training Record

Personal details of the Trainee

Name: _____

Date of Birth _____

Personnel No.: _____

Part-66 Category: B1.1 B2

Date Part 147-theory & practical course completed: _____

Trainee name: Anne Annesen	Part-66 AML no.: DK.66.xxxx	Category of OJT: B1.1
Aircraft type: Boeing 797	AMO approval no.: DK.145.xxxx	Location: Tønder lufthavn

Introduction

This document lists the practical training elements performed by the named trainee during the arrogated practical maintenance period for the mentioned aircraft. Entries in this record shall be made using BLOCK CAPITALS with permanent pen. Dates entered shall follow the format DD/MM/YYYY. Each ATA chapter that relates to the aircraft and category concerned has to be worked on according task completed summary.

Up to 50% of the required OJT may be undertaken before the aircraft theoretical type training starts. It shall have been started and completed within the 3 years preceding the application for a type rating endorsement. The final assessment of the completed OJT is mandatory and will be performed by a designated assessor appropriately qualified.

The OJT must include one-to-one supervision and should involve actual work task performance on aircraft / components, covering line and/or base maintenance tasks. Detailed worksheets shall record the precise nature of the work undertaken with the emphasis on the safe performance of maintenance, inspections, routine and non-routine work, troubleshooting, repairs, adjustments, replacements, rigging and functional checks carried out i.a.w. the AMM or other technical documentation, during practical training or work experience.

Regarding the day-to-day supervision of the OJT program in the approved maintenance organisation and the role of the mentor(s), the following should be considered:

- the day-to-day OJT performance, the supervision aims at overseeing the complete process, including task completion, use of manuals and procedures, observance of safety measures, warnings and recommendations and adequate behavior in the maintenance environment.
- Tasks to be trained need to involve: workflow organisation, paperwork handling, standard procedures and tasks used in everyday maintenance operations.
- The mentor(s) should personally observe the work being performed to ensure the safe completeness and should be readily available for consultation, if needed during the OJT performance.
- Before and during all practical tasks, all relevant safety precautions must be followed. To carry out any task read and follow the instructions given by the relevant official documentation.
- The tasks listed shall refer to an actual job card / work order / technical log book or ground log book report.
- The mentor(s) should countersign the task and release the maintenance tasks as the trainee is still not qualified to do so.
- Category "A" maintenance tasks may be released by the trainee as long as the internal company authorisation related to the aircraft type is given. The performance of the related tasks does not override the personally observation and confirmation by the mentor(s).
- In order to facilitate the verification by the competent authority, demonstration of the OJT shall consists of countersigned copies by the mentor(s) and trainee of detailed documentation (e.g. technical / ground log book records) demonstrating how the OJT meets the requirement of this task.
- Engine-independent tasks may also be performed on the same model with a different engine, provided the AMM tasks are identical.

In exceptional cases where the OJT cannot be completed due to lack of true maintenance tasks, the supervisor may instruct and observe a maximum of 10 tasks conducted as practical training on the aircraft. ETC-00-00-0054 'Use of Aircraft for Technical Training Purposes' must be used for this purpose. The practical performance of the task shall be documented in the ground logbook. This process must be planned and executed in consultation with the Operational Manager Technical. - MCC Duty Manager.

Both, the TLB & GLB references have to be record in the OJT document if this procedure is applied. The ground log book record should demonstrate the performance of the related tasks as practical (including theoretical aspects) elements.

Application of this procedure must be authorised by the Senior Manager Maintenance.

Trainee name: Anne Annesen	Part-66 AML no.: DK.66.xxxx	Category of OJT: B1.1
Aircraft type: Boeing 797	AMO approval no.: DK.145.xxxx	Location: Tønder lufthavn

“Task codes” should be used as appropriate

Task Code	Description
INS	Inspection
FOT	Functional or operational test
SGH	Service Ground Handling
R/I	Removal and installation
MEL	MEL
T/S	Troubleshooting

Trainee name: Anne Annesen	Part-66 AML no.: DK.66.xxxx	Category of OJT: B1.1
Aircraft type: Boeing 797	AMO approval no.: DK.145.xxxx	Location: Tønder lufthavn

The approved mentoring person must be identified in the list of authorized Mentors.

Identification of authorized Mentors for this OJT
